

25, WILTON PLACE.
S.W.

Jan 2 1876

My dear Gray,

We have a plant from you
Chejor Scheibrecht n. 157 marked
Teucrosterma Chejense A. Gr. It
is a third species of my Orthocentrus
sect. Catopercia which I am disposed
to refer to the rank of a genus. I
cannot find out whether you have
ever published your Teucrosterma.
If you have I must adopt that
name ~~of course~~ - if never
published I should have taken my name
of Catopercia but I cannot recollect how
I compared it - I think there was some
misprint about it for as it is it is
non-sensical - You will observe that
the names are delineate on the
interior ~~of the~~ lobes as in Oreocentrus

not ascending between the two
posterior lobes as in *Agropyrum*.

I write now in a hurry as there
will be but time to get your answer
where if at all you have published
it before the printer is at Labate's
and is now in Beauthorn and
Providence are in his hands.
I have two sheets to send you
tomorrow

With every good wish for happy
new year to yourself and Mr Gray
ever yours
Jerry Beuthorn
